DETAILED ACTION

Response to Amendment

1. Claims 1-7, 9-16, 18, 19, 25, 28 and 36 have been amended, claims 31-33 have been deleted and new claims 37-38 have been added. Hence, claims 1-30 and 34-38 are pending in the application.

Information Disclosure Statement

2. The references cited in the Search Report dated November 2, 2003 have been considered.

Claim Objections

3. Claims 6, 18, 19 and 22-29 are objected to because of the following informalities: in claim 6, line 4, the term "(non-polar)" should be deleted; also in claim 6, line 5, the term "(acrylate monomers)" should be deleted; in claim 18, line 5, the term "(acrylate monomers)" should be deleted; in claim 19, line 4, the term "form" should be replaced with the term "from" and in claims 22-29, the term "(resin)" should be deleted.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

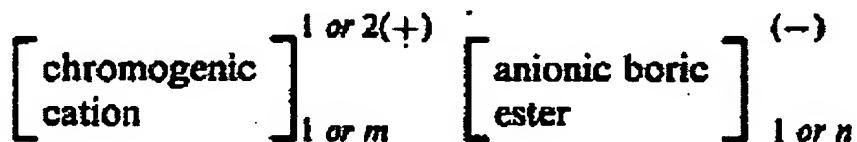

A person shall be entitled to a patent unless –

Art Unit: 1755

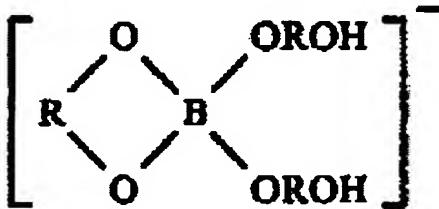

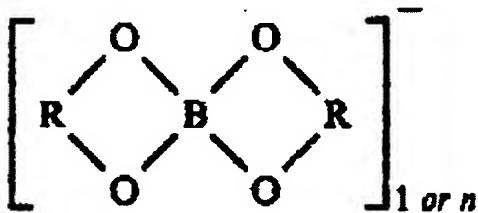

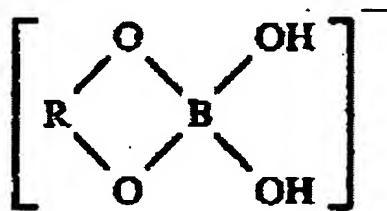

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3, 5, 6, 8-11, 22-28 and 34-38 are rejected under 35 U.S.C. 102(b) as being anticipated by De Feo et al. (US 4,306,875).

De Feo et al. teach water-insoluble salts of basic dyes with good solubility in organic solvents comprising a basic dye of the formula

wherein the chromogenic cation is a residue of a basic dye such as Basic Yellow 11 (i.e. cationic dye of the formula as claimed by applicants) and the anionic boric acid ester is represented by the formula

wherein R is the residue of an aliphatic alpha, beta-diol or of an aromatic orthodiol which can be further substituted or the residue of an aliphatic alpha-hydroxy-carboxylic acid or of an aromatic ortho-hydroxy-carboxylic acid which can be further substituted (i.e. organic anion). De Feo et al. further teaches that the above water-insoluble dyes are useful in printing lacquers and ink compositions such as solvent and water flexographic inks, off-set and rotogravure printing inks and inks for ball point pens and inking pads. See col. 1, lines 53-55, col. 2, lines 18-55, col. 3, line 50 – col. 4, line 6, col. 5, lines 40-45, col. 7, lines 16-20, examples 3, 4 and 22 and claims 1-4. The water-insoluble salts of basic dyes and ink compositions containing the water-insoluble salts of the basic dyes as taught by De Feo et al. appear to anticipate the present claims.

Allowable Subject Matter

6. Claims 4, 7, 12-21, 29 and 30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art teaches or fairly suggests: (1) a basic dye of the formula as claimed by applicants wherein R₁-R₄ are methyl; R₅ is methyl or methoxy when m is 1, or two R₅ together form -O-CH₂-O-CH₂-; R₆ is H and n is 1; (2) wherein the resin acid is an organo-soluble acid selected from the group consisting of rosin acid, abietyl acid, colophony or derivatives thereof; (3) a process for preparing a printing ink composition comprising mixing together at least one carbinol dye precursor of the formula as claimed by applicants an organic resin acid dissolved in an organic solvent and optionally a pigment and (4) extruding the carbinol dye, the organic resin acid and optionally the pigment mixture into high solids dispersion, solutions or pastes of the ink vehicles as claimed by applicants.

Conclusion

The remaining references listed on forms 892 and 1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the above rejections.
